Highlights

4.6cm (1.8") display
Easy to read 4.6 cm (1.8") display with white backlight

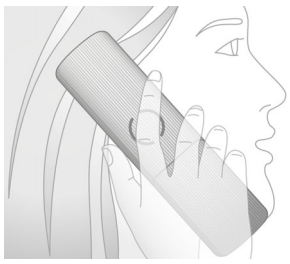

Advanced sound testing
We test the sound quality of our DECT phones the same way as high-end headphone manufacturers do. Using an advanced ear simulator, we can accurately re-create the way people actually hear. This helps our acoustic engineers to measure and fine-tune things like frequency response, distortion and overall hearing perception, to create perfect voice reproduction.

Caller ID*

Sometimes it is good to know who is calling before you answer. And our Caller ID lets you keep track of who is on the other end of the line.

Handset speakerphone

Handsfree mode uses a built-in loud speaker to amplify the voice of the caller, allowing you to speak and listen during a call without holding the phone to your ear. This is especially useful if you want to share the call with others or simply multitask.

Non-slip grip

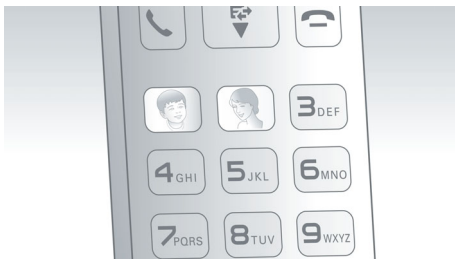

The rear of the handset is treated with a special texture for added comfort and better grip.

Optimized antenna layout

Our optimized antenna layout ensures strong and stable reception – even in areas of the house where cordless transmission is difficult. Now you can take a call wherever you are in the house, and enjoy a long, uninterrupted conversation even as you walk around.

Parametric Equalizer

Our telephones use parametric equalization in the digital sound processing to fine-tune the sound response back to the intended linear frequency response curve, delivering sound that is pure and clear, for each conversation.

Programmable hot keys

Now calling the people you care about most is easier than ever. With simple one-touch dialing, you will never have to search for their number again. You can program up to 2 keys for instant calling.

Up to 16 hours talk time

Up to 16 hours talk time on a single charge

Multiple privacy settings
Value your privacy and quiet at home? Black List restricts specific numbers or those starting with certain digits, protecting you from receiving unwanted calls. You can choose to block up to 4 sets of numbers. Each set can consist of 1 to 24 digits. If the number of an incoming call starts with any of these number sets or are the exact numbers that you chose to blocked, your phone will not ring. With Call Barring, you can avoid the surprise of expensive phone bills by blocking calls to specific numbers starting with certain digits (for example, pay per call numbers).
