*Internal tests on 1000 g each of grapes, apple, blackberry, strawberry, tomato, watermelon, orange and pomegranate.

Highlights

MicroMasticating technology

Fruits and vegetables have many thousands of cells that contain juice, vitamins and other vital nutrients. Philips innovative MicroMasticating technology is designed to open up the cells to squeeze the maximum out of your favourite ingredients and will help you to get up to 90%* of your fruits into the glass and not as waste.

Soft fruits to hard vegetables

Leaves, greens and nuts

Leaves and greens full of fibre are also great ingredients for healthy juices and they can all be processed in this juicer. Wheatgrass, spinach and many others could be an important health-adder to your daily juices with MicroMasticating technology. You can even use certain kind of nuts, such as almonds to prepare almond milk.

Pre-clean function

The pre-clean function is a special programme that squeezes the last drops of juice out of the juicer while cleaning the inside of your product at the same time. This will help you to get the best from your fruits and vegetables and avoid that valuable juice going to waste in the cleaning process.

QuickClean in 1 minute

With an easily detachable design and rimless parts, this juicer can be quickly cleaned using only tap water. Because there are no sharp edges, the fibres or particles of ingredients are rinsed away in seconds.

No-sieve design

Our unique no-sieve design allows the juice to flow seamlessly to your glass, passing through a filter that removes any unwanted parts from the juice and is so easy to clean that you don't need any brushes.

Innovative drip stop

A fully integrated drip stop allows you to stop between juicing sessions and keep your kitchen worktop clean at all times. Simply push the bottom of the juice outlet and without wetting your fingers the juice flow will stop.

LED feedback

LED gives you feedback when operating this juicer. After reassembling you will know when the product is ready to juice again or if you still need to place the parts in the right places. Everything with your safety in mind.

Slim design

Specifications

Sustainability

Packaging: > 90% recycled materials
User Manual: 100% recycled paper
