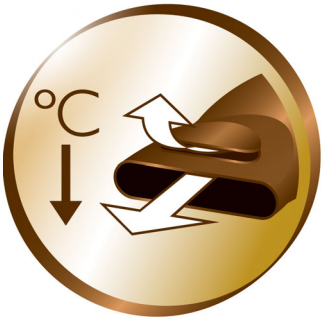
2300W AC motor - 120 km/h, Ionic Care, Style & Protect nozzle

HPS920/03

Highlights

Style & Protect Concentrator



The innovative and unique Style & Protect concentrator has been invented to allow precise styling of the hair with a 6mm concentrator while at the same time caring for the hair. When styling the hair with a thin concentrator, it gets very close to the hair, sometimes touching the hair. Heat of up to 180degrees C builds up and is damaging the hair by overheating. The Style & Protect concentrator forces the flap to open, when the hair gets too hot disolving excessive heat and improving styling power.

ThermoProtect setting

The ThermoProtect temperature provides the optimal drying temperature and gives additional protection from overheating the hair. With the same powerful airflow, you will get the best results in a caring way.

Six speed and heat settings

The speed and heat required can be easily adjusted to create the perfect style. Six different settings ensure full control for precise and tailored styling.

Professional 2300W

This 2300W professional hairdryer creates a powerful airflow. The resulting combination of power and speed makes drying and styling your hair quicker and easier.

Ionic Care

Ionic conditioning enables anti-static drying. Charged negative ions eliminate static hair, condition the hair and smooth down the hair cuticles to intensify the hair's shine and glossiness. The result is smooth and frizz-free hair that shines beautifully.

Ceramic technology

The ceramic element issues far infrared heat,which has a gentle warmth that helps dry your hair from within and protects it from overdrying, without compromising on speed and effectiveness.

Cold Shot

A must-have professional function, the Cold Shot button provides an intense burst of cold air. It is used after styling to finish and set the style.

Professional AC motor

This type of motor is specially developed for the professional market and brings you several benefits. Most important, it has a longer lifespan than usual motors which lengthens the lifetime your hairdryer by 50%. On top of this, is also has an extra powerful airflow, which enables this dryer to dry 55% faster* than other AC motor dryers. *vs. predecessor HP4997

120 km/h drying speed

This dryer reaches a drying speed of up to 120km/h, which allows a 50% faster dry than other dryers.* *vs predecessor HP4997
