Cage nuts for 19" rack, set of M6X20 screws + washers and nuts

Item no.: LVR261706
LVR261708

PRODUCT OVERVIEW

You use cage nuts when you need to mount a product in your rack that requires a threaded hole.

A cage nut is a square nut that has threaded holes wrapped in a piece of spring steel designed like a cage. This spring steel has two flanges that when pressed together allow the cage nut to be inserted into the square hole and simply clip in.

When this is done, you now have a square hole that is threaded.

PART NO.	
LVR261706	Set of 4 x M6X20 screws + washers and nuts
LVR261708	Set of 50 x M6X20 screws + washers and nuts
