Highlights

Wireless music streaming

Bluetooth is a short range wireless communication technology that is both robust and energy-efficient. The technology allows easy wireless connection to iPod/iPhone/iPad or other Bluetooth devices, such as smartphones, tablets or even laptops. So you can enjoy your favourite music and sound from videos or games wirelessly.

Anti-clipping function

Anti-Clipping lets you play music louder and keeps the quality high, even when the battery is low. It accepts a range of input signals from 300 mV to 1000 mV and keeps your speakers safe from damage by distortion. This built-in function monitors the musical signal as it goes through the amplifier and keeps peaks within the amplifier's range, preventing the audio distortion caused by clipping without affecting loudness. A portable speaker's ability to reproduce musical peaks decreases along with battery power, but anti-clipping reduces peaks caused by low battery, keeping music distortion-free.
