Highlights

Warm white light (2700 K)
Light can have different colour temperatures, indicated in units called Kelvin (K). Bulbs with a low Kelvin value produce a warm, cosier light, while those with a higher Kelvin value produce a cool, more energising light.

Dimmable

Designed to provide quality dimming to create the right ambience for any activity, from relaxed to active atmospheres.

Very low energy consumption

By replacing traditional light bulbs with a Philips LED alternative, you will gain immediate, significant energy savings while contributing to a sustainable planet.

LEDClassic (filament)
LED Classic bulbs are based on standard LED energy-saving technology, except the LEDs are arranged in such a way as to mimic classic incandescent bulbs. Now you can enjoy this retro-style bulb with state-of-the-art technology.

Omnidirectional light
This innovative lens delivers omni-directional light distribution, preventing the shadow that normally appears at the beam spread edge. The result? Natural, warm white light all around.
