Highlights

HeatProtect prevents heat

You use your netbook on your lap to watch videos on a train, listen to music at the beach and browse the net, chat with friends or work on documents when you are at the airport. But over time the heat generated from sustained use makes your legs feel uncomfortable and could damage your netbook. Philips HeatProtect protects you and your netbook by keeping you both cool with its layer of aluminium to disperse the heat from your netbook, rigid surface to give it the air circulation it needs and an insulating layer to protect you from high temperatures.

Stable surface for the netbook

If you use a magazine as a desk on your lap it is very slippery and is not a stable surface for your netbook, especially when you want to assume a comfortable position for your body. And you might damage your netbook if it slides off. The Philips Netbook Sleeve has a flat top surface for your netbook and a soft underside for your lap, so you can keep your netbook stable and secure while you watch YouTube, listen to music or work on documents anywhere you go.

Soft, comfortable underside for your lap

Easy to slip your netbook in

The Philips Netbook sleeve has three sides that open, so you can slip your netbook in easily.

Rubberised zips

Your netbook or notebook might get scratched by the zip head when you put it into your sleeve or bag. The Philips sleeve and bag use a rubberised zip puller to reduce the possibility of your netbook and notebook being scratched as well.
