GXT 890 Cada RGB Mechanical Keyboard

Mechanical keys – built to last

The CADA RGB Gaming keyboard is equipped with Outemu Red switches with great responsiveness and feel, that last up to 50 million keystrokes. With only 5ms of response time, the keyboard signals a change in key state just as fast as your own reflexes, keeping you ahead of competition at all times. Besides, the CADA has individual switches with dedicated diodes, so every key press results in an input and is 100% ghost free without tradeoff.

Customize each key

The CADA features advanced software that allows you to select and program each zone of the keyboard according to your preferred LED backlight illumination. Individually per key, or created as one of 10 custom light profiles suiting your favourite games. Apart from custom settings, you can also use 18 pre-set light effects like e.g. the rainbow wave effect.

Programmable macros

The advanced gaming software also allows you to assign a series of keypresses to one button and create macro's to decrease response time within the game. Besides, the CADA has a dedicated Gaming mode for disabling Windows keys.

Design

With a metal crafted top plate and rubber feet, preventing the keyboard from slipping, the CADA stands out in both functionality and design.
