Highlights

A warm welcome, everyday

Experience the comfort of your lights turning on automatically when you reach home. Unpack your car, enter your house, all with the convenience of your outdoor lights. Having friends over? Welcome them with lights gently switching on as they approach the front door.

Automatically turn on lights

The outdoor sensor turns on your Philips Hue lights automatically when somebody passes by, outdoor and indoor. By connecting the sensor to your bridge via the Philips Hue app, you can choose which lights go on, even inside your house. Also choose the scene or light setting that should be triggered. The integrated dusk-to-dawn sensor ensures your lights only switch on when it is actually dark outside helping you to conserve energy.

Installed in a minute

The outdoor sensor is easy to mount and fully wireless. So you don’t need an electrician to have it installed. Just unpack the sensor, set it up through the app and install it wherever you like. Configuring the sensor and setting the daylight and motion sensitivity is also done via the Philips Hue app.

Place it where you want

The kit comes with different mounting components so you can mount it on a flat wall, or on the inner or outer corner of a wall or post. You can also mount it on a pole or rain pipe. So it's perfect for your front yard, around your door, the garage or any place around your house where it matters.

Requires a Philips Hue bridge

Connect your Philips Hue lights with the Bridge to control your lights from your smart phone or tablet via the Philips Hue app. Or control your Philips Hue lights with the Philips Hue dimmer indoor switch for on/off and dimming functionalities.

Resistant to all weather

This Philips Hue outdoor sensor is specially designed for use in outdoor environments and has undergone rigorous tests to ensure its performance. Certified by UL, the product will withstand heavy rainfall and other weather conditions.

Scare away uninvited guests

Thanks to the large view angle and detection range the outdoor sensor will spot any movement near your home. It can directly turn on your outdoor lights to expose uninvited guests in the light. You can set the indoor lights to turn on so it looks like you're home, even when you're not.
