Product Benefits & Features

Cooked to taste. Consistently
The advanced ProFry Sensor in the AEG induction hob provides consistent frying for each dish. Using pre-set frying levels – rare, medium, well-done – the hob will sense, control and regulate an even temperature across the surface of the hob and the pan. So everything is cooked to taste.

- Automax function
- Powerful booster
- 15 stage digital power level displays
- Child safety control lock
- Control lock
- Front left: 1 large induction zone with booster

The adaptable surface for every pan
The MaxiSense® induction hob has self-sizing cooking zones. That means each zone detects the sizes and shapes of the pans you're using, however large or small, and sends immediate heat to fit their bases exactly. So you have complete control, and the hob responds just the way you need it to.

Perfect control
'Direktouch' controls use the very latest digital technology to ensure precise heat selection.

The cooler surface for a safer kitchen
Our intelligent induction technology heats pans and the food in them, but nothing else. The surface round the pans stays cool. So if you accidentally touch the hob near the pans while you're cooking, your fingers are safe.

Intense rapid heat
No more waiting around for pots to boil. The PowerBoost button gives you an instant burst of heat that boils water in under 90 seconds* – that's even faster than an electric kettle. It's perfect for tasks like boiling potatoes, and other quick cooking jobs too, like searing meat.
